EPROPULSION

Silence on the Water. Magic in the Moment.

Thula eBoats redefine game viewing with a silent, sustainable experience. Glide across the water without noise or fumes — only the sounds of birds, reeds, and ripples. Powered by solar energy and advanced battery systems, each vessel delivers true off-grid performance with minimal maintenance and zero emissions.

Every eBoat is designed around its environment and purpose — from tranquil sundowner cruises to full-day explorations. Our modular system allows full configuration, with motor options including 12 kW, 20kW and 40 kW (single or dual) and scalable battery capacity, optimised for your range, charging setup, and operating style. The result is effortless performance, exceptional efficiency, and a deeper connection to nature.

Zero-emissions - Solar Powered options for complete off-grid

Reduced operating costs through minimal maintenance and no fuel costs

Near silent experience

Onboard power to power fridges, induction hobs or coffee machines

No harmful pollutants or chemicals from petrol or oil go into the delicate water ecosystems

Modular system that can be adapted to suit your lodges specific needs
